Product Description

Invitrogen makes blotting of E-PAGE™ Gels easier and more efficient by providing a fiber blotting pad and several types of pre-cut pre-assembled membrane/filter paper sandwiches that perfectly fit 8.6 cm x 13.5 cm E-PAGE™ Gels*. The available nitrocellulose and Invitrolon™ PVDF membranes are designed for western transfer of proteins. Pre-cut extra-thick absorbent Blotting Paper (2.5 mm thickness) for E-PAGE are also available to accommodate the E-PAGE™ blotting set-up using a semi-automatic apparatus. A protein's properties affect its ability to bind to membrane surfaces. The right membrane may require experimenting with your specific protein on different membranes.
